With over 50 years of experience providing fuel system/ Underground Storage Tank testing and repairs, we have learned a thing or two about how to streamline this process. At TAIT, we decided to develop our own in-house systems that have been tested and approved as required tools on every UST testing and compliance project.

TECS Online, which stands for TAIT Environmental Compliance System, is a customized web-based platform that allows technicians to complete inspection, testing, and training forms electronically in the field, and then immediately provide that information to managers and to the Authority.

Simplex is our scheduling system which has allowed us to better schedule tests and repairs of all our clients in a quick and efficient manner whereby everyone, including the client, is made fully aware of what services are scheduled.
